

Dominik Ciołczyk

Data Science Student

About me

Informatics engineer and Data Science Master's student, currently writing a scientific article on cloud resource consumption prediction. At Sabre, I gained experience in large-scale cloud systems and strengthened skills essential for data science—attention to detail, analytical thinking, and validation. Skilled in Python, end-to-end data workflows, and machine learning applications, I'm eager to apply my skills to meaningful, data-centric work.

Areas of specialization

Time Series Forecasting • ML Pipeline Orchestration • Image Processing • Model Validation • Software quality

Languages

Polish | C2
English | C1

Personal Info

Location: Trzebinia, Poland
Driving licence: Category B

Interests

Science fiction • Strategic games
• Geopolitics • Astrophysics
• 20th-century history
• Piano playing
• Ballroom dance (Class B)

EDUCATION

02/2024–Current	Master of Engineering INFORMATICS – DATA SCIENCE · AGH University of Krakow  Thesis: Short- and long-term prediction of cloud resource consumption using deep learning.
10/2020–01/2024	Engineer INFORMATICS · Silesian University of Technology  Thesis: An application supporting the analysis of the corneal endothelium. Final grade: 5, awarded the Rector's Scholarship for academic excellence.
09/2016–06/2020	Technician INFORMATICS · Technikum w Zespole Szkół Techniczno-Ustługowych  · Trzebinia 

WORK EXPERIENCE

07/2024-05/2025	Software Quality Engineer SABRE POLAND  · Cracow  Designed and maintained automated acceptance tests in a large-scale monorepo; analyzed regression results to identify issues and verify new features.
09/2022	Full-stack Developer PROINTEGRA  · Katowice  Identified and resolved software bugs; wrote unit tests to ensure reliability of a web application.
10/2020	IT Technican TAURON WYTWARZANIE S.A.  · Trzebinia  Programmed industrial controllers used in power plant automation systems. Additionally, provided remote IT support and troubleshooting for internal users within the infrastructure department.

PROJECTS

01/2024	<i>corneal-endothelium-analEYEzer</i> - a microservice-based system using Next.js, DRF, Celery, and RabbitMQ, integrated with MinIO for image storage and a SQL database for metadata. The system allows users to upload corneal endothelium images and supports asynchronous processing and analysis of medical parameters.
07/2023	<i>MediMoveApp</i> - a web application written in C# that enables the management and tracking of sanitary transport services.

TECHNOLOGIES

Python, C/C++	
Docker, Linux, Git	
Machine Learning	
ZenML, MLflow	
AWS, GCP	
Java, Typescript	

MEMBERSHIPS

04/2024–Current	SatLab AGH student science club
03/2024–Current	Transpeed AGH student science club
02/2017-05/2017	Volunteer at DKMS.
