

Dominik Ciołczyk

Data Science Student

About me

Informatics engineer and Data Science Master's student, currently writing a scientific article on cloud resource consumption prediction. At Sabre, I gained experience in large-scale cloud systems and strengthened skills essential for data science—attention to detail, analytical thinking, and validation. Skilled in Python, end-to-end data workflows, and machine learning applications, I'm eager to tackle real-world, data-driven challenges.

Areas of specialization

Data flows · Time Series Forecasting · Software quality · ML pipeline orchestration

Languages

Polish | C2 mother tongue
English | C1

Personal Info

Location: Trzebinia, Poland
Driving licence: Category B

Interests

Astronomy · History · Ballroom dance · Philosophy

EDUCATION

02/2024–Current	Master of Engineering INFORMATICS – DATA SCIENCE · AGH University of Cracow  Thesis: Short- and long-term prediction of cloud resource consumption using deep learning.	
10/2020–01/2024	Engineer INFORMATICS · Silesian University of Technology  Thesis: An application supporting the analysis of the corneal endothelium. Final grade: 5, awarded the Rector's Scholarship for academic excellence.	
09/2016–06/2020	Technician INFORMATICS · Technikum nr 2 w Zespole Szkół Techniczno-Usługowych w Trzebinie 	

WORK EXPERIENCE

07/2024-05/2025	Software Quality Engineer SABRE POLAND · Cracow  Design and maintain automated acceptance tests in a large monorepo, analyze regression results.	
09/2022	Full-stack Developer PROINTEGRA · Katowice  Focused on debugging and writing unit tests within an existing web development project.	
10/2020	IT Technican TAURON WYTWARZANIE S.A · Trzebinia  Provided technical support and assisted in programming industrial controllers.	

TECHNOLOGIES

Python, C/C++	
Docker, Linux, Git	
Machine Learning	
Java, Typescript	
AWS, GCP	

PROJECTS

01/2024	<i>corneal-endothelium-analEYEzer</i> - a microservice-based system using Next.js, DRF, Celery, and RabbitMQ, integrated with MinIO for image storage and a SQL database for metadata. The system allows users to upload corneal endothelium images and supports asynchronous processing and analysis of medical parameters.
07/2023	<i>MediMoveApp</i> - a web application written in C# that enables the management and tracking of sanitary transport services.

MEMBERSHIPS

04/2024-Current	SatLab AGH student science club
03/2024-Current	Transpeed AGH student science club
02/2017-05/2017	Volunteer at DKMS.
